

Installation Process

Please follow these steps and the SYNC guide (next page) in order to connect to Network & GPS – this process may take up to 15 Minutes:

1. Make sure vehicle is in open view of the sky.
2. Plug device into OBDII port.
3. Start the vehicle– you should see the LEDs light up on the front of the device.
4. If for any reason you do NOT see the LEDs light up, with the device installed and engine running, unplug the device and repeat steps 2 and 3.
5. Once you see the LEDs flashing – please leave the device plugged in for at least 5 minutes.
6. If your device has a SOLID Cellular light after 5 minutes - the SYNC process is complete.
If not, please POWER CYCLE (Instructions below) to restart SYNC process.
7. Once the SYNC process is complete – log into your Car Connection 2.0 MOBILE APP or WEBSITE to review location, vehicle and account information.

NOTE: Data may not appear on your account until you go for a drive.

HOW TO POWER CYCLE

1. Un-plug device from OBDII port – for ~15 seconds
2. Start your vehicle's engine
3. Plug device into OBDII port – **with ENGINE RUNNING**
4. Wait approximately 5-10 minutes – **with ENGINE RUNNING**
NOTE: Reference SYNC Guide for more information.
5. Turn off vehicle/engine

Syncing Your Device

Syncing your Car Connection 2.0 device is a two step process. First you must plug the device into your OBDII Port. After the installation, start your engine and follow the steps below to Sync your device. If you are having connection issues – make sure your vehicle has a clear view of the sky.

LED KEY:			
S = SOLID	SB = SLOW BLINK	FB = Fast Blink	N = No Light

STEP 1

LED	Time Plugged in: 2-5 Minutes
	Ensure POWER LED is ON, device is properly installed and the engine is running. If your device has a SOLID Cellular light after 5 minutes - the SYNC process is complete. If not, please power cycle and continue.
