Installation Notes

M Tuner For All Models	CNP2000UCA	MUST ORDER BOTH - MUST BE PROGRAMMED PER INSTRUCTIONS INCLUDED		
KM Direct Connection Cable required with CNP2000UCA	CNPJEN1			
Toyota XM Ant Adapter - Allows CNP2000UCA to use OEM	1124153			
Antenna				
Toyota USB Port Media Link - Fits Factory location in all				
Toyota models - Can ONLY be used with Vehicle Specific	32813570			
Radio's				
iPod Cable Required for iPod Video	JLINKUSB			

GM Specific Notes

OGM1 Works with Factory GM XM tuner or CNP2000UCA Tuner from XM. Program with each models specific flash on XMDirect. Must use XMDirect version 3.3 or later ONLY! Always uninstall previous versions of XMDirect before downloading the new Flash utility.

Advent OGM1 - Works with Bose and Non-Bose equipped Vehicles - NOT COMPATIBLE WITH CENTER POINT SYSTEMS - SEE BELOW:

OGM1 Works with all current GM Functions, Warnings, OnStar, OnStar Navigation Voice Turn By Turn, Factory Bluetooth, Overhead Rear Video and Rear Seat Audio. Note: Cannot change XM station from Rear Seat Audio controls. All other RSE controls operate as normal. GM OnStar contains the GM Bluetooth. This remains working in all GM cars. The steering wheel controls in GM will continue to operate the GM Bluetooth, not the Advent Bluetooth. This is normal and cannot be changed or the OnStar system could not be controlled. The Advent Bluetooth can be used by utilizing the on screen controls.

GM Centerpoint systems: The OGM1 is not designed to work with the GM Centerpoint system. The easiest way to identify this system is by the center channel dash speaker. The factory radio may also have the DTS logo on the front of the radio. If you install a OGM1 into a Centerpoint equipped vehicle you will get no sound from the radio. This is normal and due to the fact that they are not compatible. There is nothing wrong with the radio. The vehicle may also show the code UQA on the trim/options tag in the glove box.

*1: For REAR SEAT VIDEO USE METRA ADAPTER "GMRSAV" or PAC ADAPTER "GMRVD" ***** In some older vehicles they were equipped with a Panasonic Overhead with a DVD loader. If this is the case a PAC OS-4 or equivalent Adapter is required. Recommend contacting PAC or Metra for the latest part number.

*2: Acadia with "Cargo Area Audio Controls" - Not compatible with these controls - Comes in Technology Package

*3 For Older GM Vehicles with NON CAN Backup Camera, use Metra adapter part # BACKUPCAM

*4: On Hyundai with the Infinity Sound System - Radio will activate amplifier, use AMP ON/OFF adjustment, same as OGM1 Bose Adjustment . See tech update at audiovoxuniversity.com for more information - Bose amplifier setting.

*Notes: Steering Wheel Controls May Operate Differently Than On The OEM Radio That Has Been Removed Due to Added Features And Functions - This is covered in the owners manual for the end user.

OEM USB/AUX input jacks are not compatible with Advent OE Radio's. Most are not capable of charging iPhones or iPods at 1amp and do not have Video inputs. The Advent OE Radio Media Link is high speed USB 2.0, charges at 1amp and allows Video playback from iPhone/iPod (when using the correct cable) or supports Aux in from DVD players and other video devices.

If any discrepancies are found please advise immediately. All vehicles are subject to change based upon trim model, local special accessory kits offered by the manufacturer, and or dash color being changed without notice. AVX can not be responsible for these changes but will react to meet these needs as quickly as possible.
