NOTE: ALL Advent Navigation Systems are designed to replace NON-Navigation OEM Audio systems. Factory Navigation Systems often have different connections, CAN connectivity, and are not compatible with Advent OE Solutions.

Application Chart 8/03/2012

XM Tuner For All Models

XM Direct Connection Cable required with CNP200 **Toyota XM Ant Adapter - Allows CNP2000UCA to ι OEM Antenna Toyota USB Port Media Link - Fits Factory location**

iPod Cable Required for iPod Video

OGM1 Works with Factory GM XM tuner or CNP20 **Tuner from XM. Program with each models specif** on XMDirect. Must use XMDirect version 3.3 or **ONLY!** Always uninstall previous versions of XM before downloading the new Flash utility.

GM Centerpoint systems: The OGM1 is not designed to work with the GM Centerpoint system is by the center channel dash speaker. The factory radio may also have the DTS logo on the front of the radio. If you install a OGM1 into a Centerpoint equipped vehicle you will get no sound from the radio. This is normal and due to the fact that they are not compatible. There is nothing wrong with the radio. The vehicle may also show the code UQA on the trim/options tag in the glove box.

*1: All OGM1 radios now include a rear seat video harness. For REAR SEAT VIDEO in some older vehicles that were equipped with a Panasonic Overhead with a DVD loader, a PAC OS-4 or equivalent Adapter is required. Recommend contacting PAC or Metra for the latest part number. GM Wireless Remote control does NOT work with the OGM1.

*2: Acadia with "Cargo Area Audio Controls" - Not compatible with these controls - Comes in Technology Package

*3 For Older GM Vehicles with NON CAN Backup Camera, use Metra adapter part # BACKUPCAM

*4: On Hyundai with the Infinity Sound System - Radio will activate amplifier, use AMP ON/OFF adjustment, same as OGM1 Bose Adjustment . See tech update at audiovoxuniversity.com for more information - Bose amplifier setting.

*Notes: Steering Wheel Controls May Operate Differently Than On The OEM Radio That Has Been Removed Due to Added Features And Functions - This is covered in the owners manual for the end user.

OEM USB/AUX input jacks are not compatible with Advent OE Radio's. Most are not capable of charging iPhones or iPods at 1 amp and do not have Video inputs. The Advent OE Radio Media Link is high speed USB 2.0, charges at 1amp and allows Video playback from iPhone/iPod (when using the correct cable) or supports Aux in from DVD players and other video devices.

If any discrepancies are found please advise immediately. All vehicles are subject to change based upon trim model, local special accessory kits offered by the manufacturer, and or dash color being changed without notice. AVX can not be responsible for these changes but will react to meet these needs as quickly as possible.

ion Notes

MUST ORDER BOTH - MUST BE PROGRAMMED PER INSTRUCTIONS INCLUDED

cific Notes

OGM1 Works with all current GM Functions, Warnings (Except LDS), Side Blind Zone Alert (SBZA), InStar, OnStar Navigation Voice Turn By Turn, Factory Bluetooth, Overhead Rear Video and Rear Seat Audio. Note: Cannot change XM station from Rear Seat Audio controls. All other RSE controls operate as normal. GM OnStar contains the GM Bluetooth. This remains working in all GM cars. The steering wheel controls in GM will continue to operate the GM Bluetooth, not the Advent Bluetooth. This is normal and cannot be changed or the OnStar system could not be controlled. The Advent Bluetooth can be used by utilizing the on screen controls.
