

**Unique Clip-On
Antenna Designed
For Satellite Owners**

**Simple and Efficient
Solution**

TERK's TV42 antenna offers the simplest solution for satellite dish owners seeking to receive local broadcasting without taking on another monthly bill.

Besides being cost-effective, TERK's amplified, clip-on TV42 antenna attaches in minutes to any 18 or 20-inch satellite dish.

Installation Is A Snap

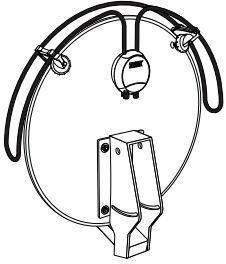

The key to this is twofold. First is TERK's patented clip: This clamp-like design adjusts with a turn of the hand to any 18 or 20-inch satellite dish. And second, with TV42 there's no need for additional wiring and what little is required for installation is included with the antenna. It's that simple.

**Designed For
Dual-LNB Dishes**

The TV42 is designed for dual-LNB satellite systems so you can connect directly to two TVs and watch satellite programming on one while watching local programming on the other.

TERK[®]

TV42
MODEL: TV-42

Reception Technology that Works

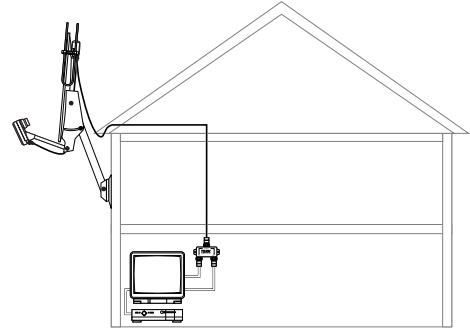

TERK's TV42 television antenna complements any 18 or 20-inch satellite dish by receiving all local, off-air VHF and UHF channels. This clip-on antenna attaches to the dish and is nearly invisible when installed. The TV42 contains an internal amplifier that minimizes signal loss so signals may be distributed to multiple televisions. The amplifier is powered by the DBS receiver, so no additional power supply is required. Because TERK's antenna elements are manufactured to be weather-resistant, they'll perform at their best for many years to come.

TV42 for Dual-LNB Dishes

The TV42's two built-in diplexers provide more than one TV with DBS signals from the dish and VHF/UHF television signals from the antenna. This means satellite and local programming can be enjoyed in a single residence at the same time.

Installation in Minutes

The TV42 mounts quickly to any 18 or 20-inch satellite dish without any tools. The patented TERK-clips attach on to the antenna element at the 10 and 2-o'clock positions and their thumb-wheel clamp secures the antenna to the top of the dish. The few cables and external diplexers necessary to complete the installation are included with any TV42 purchase. We also include extra security clips to ensure a secure installation. For best reception, the TV42 is recommended for installation on a dish located on or on top of the home.

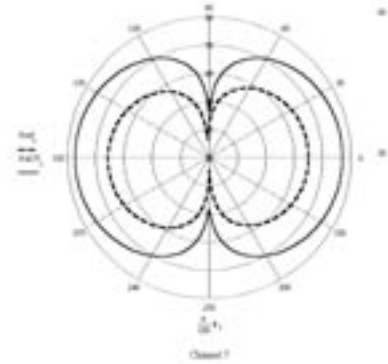

Technical Information

TV42

- Dimensions: 10.25" H x 21.25" W x 3.5" D
- Element Type: broadband, single element
- DBS Configuration: dual LNB
- Operating Bandwidth: 54 to 806 MHz
- Radiation Pattern: multidirectional
- Amplifier Gain: 20 dB typical
- Impedance: 75ohm
- Voltage Regulator: internal
- Weatherproofing: industrial powder-coated element, sealed housing

Accessories included: (2) indoor diplexers, (2) 32-inch coaxial cables, (4) 12-inch coaxial cables

TERK's TV42 antennas pick up broadcast signals from every direction but the most extreme angles.
