

## News Release

### EyeLock to Begin Taking Orders for nanoEXT, World's First Indoor/Outdoor Iris Reader

**NEW YORK, NY – JANUARY 7, 2019 – LVCC CENTRAL HALL, BOOTH 13518 –** [EyeLock LLC](#), a leader of iris-based identity authentication solutions, today announced that it will showcase an access control product that is suitable for both indoor and outdoor use at the upcoming 2019 Consumer Electronics Show in Las Vegas, NV. This first-of-its-kind device can withstand extreme exterior elements and all lighting conditions including sunlight, while still providing unmatched security and convenience.

The new nanoEXT is rated for operation in extreme temperatures (-40°C - 66°C), severe weather, and all levels of light. The device is also dust- and water-resistant (IP67), vandal-resistant (IK10), and allows for accurate authentication at a standoff distance of 16-32 inches. Automatic height-adjusting capabilities ensure ADA compliance and provide users with quick and easy authentication in under two seconds.

“We are excited to begin taking orders for the nanoEXT and firmly believe that its unique ability to authenticate in both indoor and outdoor environments makes it a powerful addition to the EyeLock product portfolio. The nanoEXT combined with our nanoNXT, will deliver unprecedented levels of security that cannot be duplicated by other biometric offerings including fingerprint and facial recognition, for any

access point whether indoor or outdoor. The applications for the new product are numerous and varied, as it easily fits into our key vertical markets which include Higher Education, Finance, Data Centers, and Transportation. Traditional high security use cases such as laboratory access and critical infrastructure are perfect for nanoEXT. More innovative use cases focusing on convenience such as collegiate or professional athletics, or residential access highlight the unique solutions EyeLock can provide,” said Jeff Carter, Chief Executive Officer, EyeLock.

Like the nanoNXT, the nanoEXT is compatible with nearly every access control system on the market. Using Wiegand, OSDP, or F2F technology, nanoEXT can simply replace or enhance any proximity or smart card reader installed today. The EyeLock Identity Suite (EIS), the Company’s enterprise platform for user/device management, provides deep integration with many of the industry’s leading enterprise access control platforms, including Lenel, AMAG, Pacom, Software House, Genetec, Honeywell, Open Options and RS2, making system and user management both simple and reliable.

**About EyeLock:**

EyeLock LLC is an acknowledged leader in advanced iris authentication for the Internet of Things (IoT), providing the highest level of security with EyeLock ID™ technology. Iris authentication is highly secure because no two irises are alike and the iris is the most accurate human identifier other than DNA. The company's significant IP portfolio, including more than 75 patents and patents pending, and proprietary technology enables the convenient and secure authentication of individuals across physical and logical environments. EyeLock's solutions have been integrated and embedded across consumer and enterprise products and platforms, eliminating the need for PINs and passwords. Corporations across the Fortune 500 recognize the level of security EyeLock provides due in part to its extremely high false acceptance rate, ease of use, and scalability. As a sponsor member of the Fast Identity Online Alliance (FIDO), a non-profit organization dedicated to creating a safer and more secure digital presence for consumers, EyeLock is dedicated to advancing digital privacy and next generation security.

**About VOXX International Corporation:**
